Claims

- 1. Articulating aid for use in dentistry, characterised in that it has, on at least one side of a support layer, a plurality of differently coloured colour layers comprising colouring pigments and at least one adhesion promoter for at least one colouring pigment of at least one of the coloured colour layers.
- 2. Articulating aid according to claim 1, characterised in that the at least one adhesion promoter is present in at least one of the colour layers.
- 3. Articulating aid according to claim 2, characterised in that an adhesion promoter is present in a plurality of colour layers.
- 4. Articulating aid according to claim 1, characterised in that a layer comprising the adhesion promoter is applied to at least one of the colour layers.
- 5. Articulating aid according to claim 4, characterised in that an adhesion promoter is present also in at least one of the colour layers.
- 6. Articulating aid according to any one of the preceding claims, characterised in that the colour layers have different layer thicknesses.
- 7. Articulating aid according to any one of the preceding claims, characterised in that the uppermost colour layer has a defined layer thickness which corresponds to the tolerance height for contact sites of a masticatory unit/occlusal unit.
- 8. Articulating aid according to claim 7, characterised in that the layer thickness of the uppermost colour layer is about 8 μm.
- 9. Articulating aid according to any one of the preceding claims, characterised in that the adhesion promoter is encapsulated in microcapsules.

- 10. Articulating aid according to claim 9, characterised in that the microcapsules are suitable for releasing the adhesion promoter as a result of the action of pressure.
- 11. Articulating aid according to either claim 9 or 10, characterised in that the microcapsules are suitable for releasing the adhesion promoter as a result of the action of an activator.
- 12. Articulating aid according to claim 11, characterised in that the microcapsules are suitable for releasing the adhesion promoter as a result of UV irradiation of the microcapsules.
- 13. Articulating aid according to claim 11, characterised in that the microcapsules are suitable for releasing the adhesion promoter as a result of the application of heat to the microcapsules.
- 14. Articulating aid according to any one of the preceding claims, characterised in that the colour layers are coloured wax layers.
